

**Year 12 Mathematics Applications**  
**Test 2 2019**

Section 1 Calculator Free  
**Sequences**

**STUDENT'S NAME:** \_\_\_\_\_

**DATE:** Friday 29<sup>th</sup> March

**TIME:** 20 minutes

**MARKS:** 21

**INSTRUCTIONS:**

Standard Items: Pens, pencils, drawing templates, eraser

Questions or parts of questions worth more than 2 marks require working to be shown to receive full marks.

---

1. (3 marks)

State the recursive rule for this geometric sequence: 380, 190, 95, 47.5...

2. (3 marks)

Determine the first three terms of the sequence:

$$T_{n+1} = T_n + 2(n + 1), \quad T_1 = 6$$

3. (7 marks)

A sequence is such that  $T_1=c$ ,  $T_2=31$ ,  $T_3=59$  and  $T_4=115$ .

(a) Show that the sequence is neither an AP or a GP. [2]

The sequence can be defined using the linear recurrence model,  $T_{n+1} = aT_n + b$ ,  $T_1=c$ .

(b) Determine the values of the constants  $a$  and  $b$ . [3]

(c) Hence, or otherwise, state the recursive rule for this sequence. [2]

4. (8 marks)

The fourth term and ninth term of an arithmetic sequence are 81 and 41 respectively.

(a) Determine the first term of this sequence. [3]

(b) State the rule for the  $n^{\text{th}}$  term of the sequence. [2]

(c) How many positive terms are there in this sequence? [3]

**Year 12 Mathematics Applications  
Test 2 2019**

**Section 2 Calculator Assumed  
Sequences**

**STUDENT'S NAME:** \_\_\_\_\_

**DATE:** Friday 29<sup>th</sup> March

**TIME:** 30 minutes

**MARKS:** 30

**INSTRUCTIONS:**

Standard Items: Pens, pencils, drawing templates, eraser

Special Items: Three calculators, notes on one side of a single A4 page (these notes to be handed in with this assessment)

Questions or parts of questions worth more than 2 marks require working to be shown to receive full marks.

---

5. (8 marks)

(a) The first three terms, in order, of a geometric sequence are 44, 17.6 and 7.04.

(i) Deduce a rule for the  $n^{\text{th}}$  term of this sequence. [3]

(ii) Calculate the 5<sup>th</sup> term of this sequence. [1]

(b) The first three terms, in order, of an arithmetic sequence are 89, 81 and 73.

(i) State a recursive rule for this sequence. [3]

(ii) State the value of the first non-positive term. [1]

6. (7 marks)

The population of a rare species of blue and green Trin frog has been declining over recent years. In 2014 an initiative was put in place to try and stabilise the population of frogs. It is known that the population decreases by 60% each year and so 150 frogs will be added to combat the population decrease. The initial population of frogs in 2014 was 2000.

(a) Show that the population of frogs one year after 2014, ie. in 2015, was 950 frogs. [2]

(b) State a recursive rule that models the number of frogs  $n$  years after 2014. [2]

(c) Using your rule from (b) state the predicted population of frogs in 2020. [2]

(d) Determine the long-term frog population. [1]

7. (7 marks)

Four terms of a sequence are shown on the axes below.

(a) Clearly label the axes using  $T_n$  and  $n$ . [1]

(b) Show that the sequence forms an arithmetic progression. [1]

(c) State a simplified general rule for  $T_n$ . [3]

(d) State the value of  $n$  such  $T_n = -100$  [2]

8. (8 marks)

Lachlan is planning a trip to Italy at the end of the year. His grandparents agree to give him some spending money. They plan to set up an account and make weekly deposits. They offer him the choice of two different savings plans.

Choice A : \$2.00 in the first week, \$2.20 in the second week, \$2.42 in the third week and so on.

Choice B : \$20 per week

(a) Write a recursive rule for  $A_n$ , the amount Lachlan receives, in terms of  $A_{n-1}$ , if he picks choice A. [3]

(b) In which week are the values of the deposit of Choice A and of Choice B the closest? [1]

(c) In which week does the total value of the savings for Choice A become greater than that of Choice B? [1]

Lachlan's grandparent's have decided that they will make weekly deposits for 45 weeks.

(d) State, with reasoning, which savings plan Lachlan should opt for. [3]
