

3. Functional groups

- Functional groups are atoms or groups of atoms that give an organic molecule its particular characteristics. (See Table 3.)
- The nomenclature of organic compounds with these functional groups follows the same rules as those previously outlined for hydrocarbons.
- If two or more functional groups occur in the same molecule then the order of priority for the principal functional group (highest to lowest) is carboxylic acid (-COOH), aldehyde (-CHO), ketone (-COC-), alcohol (-OH), amine (-NH_2), alkene (-C=C-), alkyne ($\text{-C}\equiv\text{C-}$), halogen (F- , Cl- , Br- , I-) and alkyl group (methyl, ethyl etc).

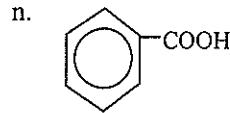

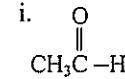

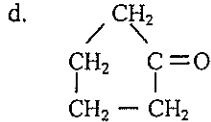

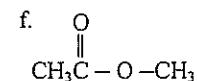

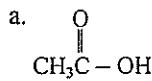

Table 3 Structure and nomenclature of common functional groups

Structural formula	Simplified formula	Class of compound	Prefix or suffix to stem	Example
$\begin{array}{c} & \\ \text{C} = \text{C} \\ & \end{array}$	$-\text{CHCH}-$	alkene	-ene	$\begin{array}{c} \text{H} & \text{H} \\ & \\ \text{CH}_3\text{C} = \text{CCH}_2\text{CH}_3 \end{array}$ <i>cis</i> -2-pentene $\begin{array}{c} \text{H} \\ \\ \text{CH}_3\text{C} = \text{CCH}_2\text{CH}_3 \\ \\ \text{H} \end{array}$ <i>trans</i> -2-pentene
$-\text{C}\equiv\text{C}-$	$-\text{CC}-$	alkyne	-yne	$\begin{array}{c} \text{CH}_3\text{C}\equiv\text{CCH}_2\text{CH}_3 \\ 2\text{-pentyne} \end{array}$ $\begin{array}{c} \text{CH}\equiv\text{CCH}_2\text{CHBr}_2 \\ 4,4\text{-dibromo-1-butyne} \end{array}$
$\begin{array}{c} -\text{F} \\ -\text{Cl} \\ -\text{Br} \\ -\text{I} \end{array}$		haloalkane	fluoro- chloro- bromo- iodo-	$\begin{array}{c} \text{CH}_3\text{CF}_2\text{CH}_2\text{CHICH}_2\text{Cl} \\ 1\text{-chloro-4,4-difluoro-2-iodopentane} \end{array}$
$-\text{O}-\text{H}$	$-\text{OH}$	alcohol	-ol or * hydroxy-	$\begin{array}{c} \text{CH}_3\text{CH}_2\text{CH}_2\text{OH} \\ 1\text{-propanol} \end{array}$ $\begin{array}{c} \text{CH}_3\text{CHOHCH}_2\text{COOH} \\ 3\text{-hydroxybutanoic acid} \end{array}$
$\begin{array}{c} \text{O} \\ \\ -\text{C}-\text{H} \end{array}$	$-\text{CHO}$	aldehyde	-al	$\begin{array}{c} \text{CH}_3\text{CH}_2\text{CH}_2\overset{\text{O}}{\underset{\text{ }}{\text{C}}}-\text{H} \\ \text{butanal} \end{array}$ $\begin{array}{c} \text{CH}_3\text{CH}_2\overset{\text{CHO}}{\underset{\text{ }}{\text{CH}}}\text{CH}_2\text{CH}_3 \\ 2\text{-ethylbutanal} \end{array}$
$\begin{array}{c} \text{O} \\ \\ -\text{C}- \end{array}$	$-\text{CO-}$	ketone	-one	$\begin{array}{c} \text{CH}_3\overset{\text{O}}{\underset{\text{ }}{\text{C}}}\text{CH}_3 \\ \text{propanone} \end{array}$ $\begin{array}{c} \text{CH}_3 \\ \\ \text{CH}_3\text{CHCH}_2\text{COCH}_3 \\ 4\text{-methyl-2-pentanone} \end{array}$
$\begin{array}{c} \text{O} \\ \\ -\text{C}-\text{O}-\text{H} \end{array}$	$-\text{COOH}$	carboxylic acid	-oic acid	$\begin{array}{c} \text{CH}_3\text{CH}_2\text{CH}_2\overset{\text{O}}{\underset{\text{ }}{\text{C}}}-\text{OH} \\ \text{butanoic acid} \end{array}$ $\begin{array}{c} \text{CH}_3\text{CH}_2\text{CH}_2\overset{\text{NH}_2}{\underset{\text{ }}{\text{C}}}\text{COOH} \\ 3\text{-aminobutanoic acid} \end{array}$
$\begin{array}{c} \text{H} \\ \\ -\text{N}-\text{H} \end{array}$	$-\text{NH}_2$	amine	-amine or * amino-	$\begin{array}{c} \text{CH}_3\text{CH}_2\text{CH}_2\text{NH}_2 \\ 1\text{-propanamine} \end{array}$ $\begin{array}{c} \text{CH}_2\text{OHCH}_2\text{CH}_2\text{NH}_2 \\ 3\text{-amino-1-propanol} \end{array}$
$\begin{array}{c} \text{O} \\ \\ -\text{C}-\text{O}- \end{array}$	$-\text{COO-}$	ester	-oate	$\begin{array}{c} \text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2\text{COOCH}_2\text{CH}_3 \\ \text{ethyl pentanoate} \end{array}$ $\begin{array}{c} \text{CH}_3\text{CH}_2\text{CH}_2\text{OOCCH}_3 \\ \text{propyl ethanoate} \end{array}$

* The optional prefix is usually used if a suffix of higher priority is already present in the name.

Set 14 Organic nomenclature

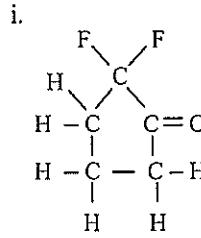

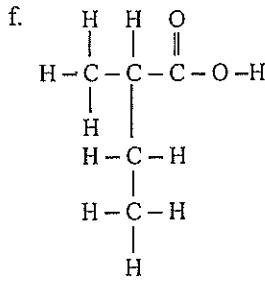

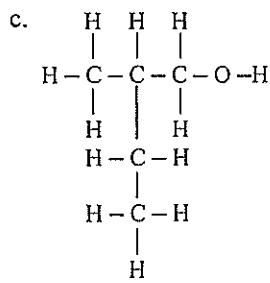

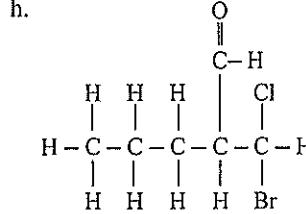

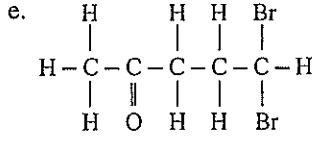

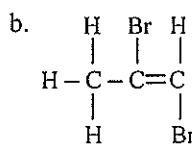

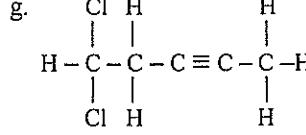

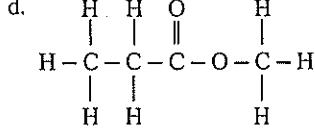

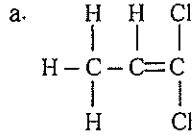

1. Name the functional group in each of the following organic structures.

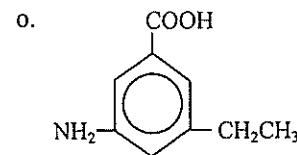

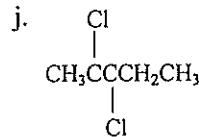

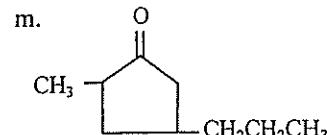

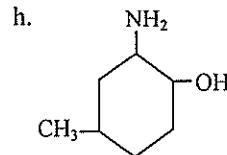

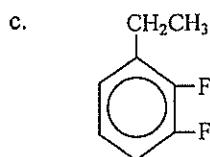

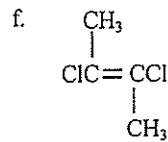

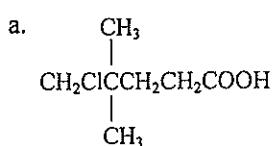

2. Draw suitable structural formula for the following organic compounds.

3. The full structural formula for several organic compounds are shown below. Give the IUPAC name for these substances.

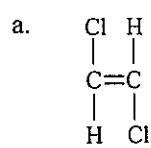

4. Condensed structural formula are shown here for some organic compounds. Give the IUPAC name for these substances. (It may be useful to write the full structural formula for these before attempting to name them.)

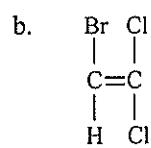

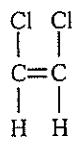

5. Examine the following pairs of compounds. Determine those pairs of compounds which represent:

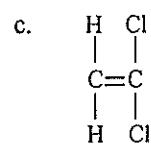

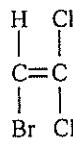

- i. the same compound
- ii. structural isomers
- iii. geometric isomers, ie *cis-trans* isomers
- iv. different compounds that are not isomers.

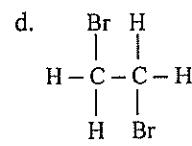

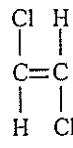

and

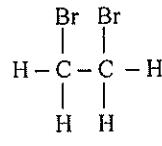

and

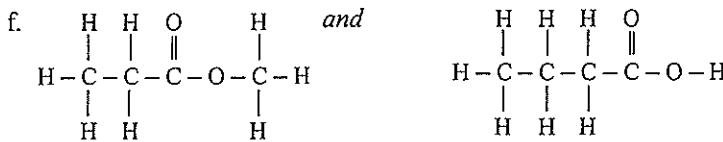

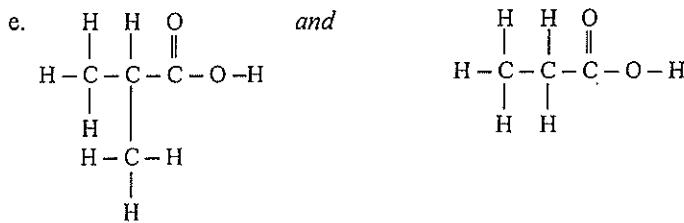

and

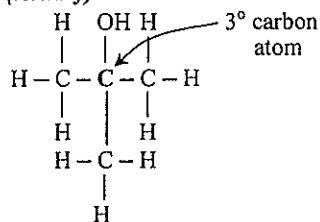

and

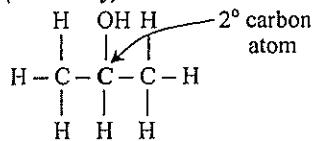

Classification of primary, secondary and tertiary alcohols is based upon the nature of the carbon atom to which the $-OH$ functional group is attached.

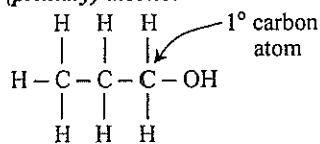

3° (tertiary) alcohol

2° (secondary) alcohol

1° (primary) alcohol

A 3° carbon is one bonded to three other carbon atoms. A 2° carbon is bonded to two other carbon atoms. A 1° carbon is bonded to a single carbon atom.

- g. $\text{CH}_3\text{COOCH}_2\text{CH}_2\text{CH}_3$ and $\text{CH}_3\text{CH}_2\text{COOCH}_2\text{CH}_3$
 h. 2-pentene and cyclopentane
 i. propanone and propanal

6. Name the compounds described below.

- The straight chain alkene of formula C_4H_8 that does not have geometric isomers.
- The tertiary alcohol (see margin note) of molecular formula $\text{C}_4\text{H}_{10}\text{O}$.
- The two esters of molecular formula $\text{C}_3\text{H}_6\text{O}_2$.
- Two saturated hydrocarbons of molecular formula C_4H_8 .
- An aldehyde and a ketone of molecular formula $\text{C}_3\text{H}_6\text{O}$.
- The aromatic compound with molecular formula C_7H_8 .

7. Name the eight isomers of $\text{C}_5\text{H}_{12}\text{O}$ that contain an alcohol functional group. Classify these as 1° , 2° or 3° alcohols.

8. A student named several organic compounds as indicated below. Unfortunately, although each name specifies a correct structure, the name given does not correctly follow the IUPAC system of nomenclature. Use the given name to determine the structure and hence give the correct IUPAC name for each compound.

- | | |
|---------------------------------|------------------------------------|
| a. 4-hydroxy-1-pantanamine | d. 1,1,1-trichloro-4-butanoic acid |
| b. 2,2,2-trimethylethanoic acid | e. 1-methyl-1,3,5-cyclohexatriene |
| c. 3-propylpentanal | f. trans-2,3-dibromopropane |

92 Answers

11. The increase in mass occurring at electrode B is due to the reduction of copper: $\text{Cu}^{2+}(aq) + 2e^- \rightarrow \text{Cu}(s)$

$$n(\text{Cu}) = \frac{m}{M} = \frac{0.972}{63.55} = 1.53 \times 10^{-2} \text{ mol Cu} \quad \text{and} \quad n(e^-) = 2 \times n(\text{Cu}) = 3.06 \times 10^{-2} \text{ mol}$$

The increase in mass at electrode D is due to the formation of $X(s)$: $\text{X}(\text{CN})_2(aq) + e^- \rightarrow \text{X}(s) + 2\text{CN}^-(aq)$

Also, the moles of electrons consumed at electrode B (3.06×10^{-2} mol) is the same as that consumed at electrode D.

$$n(\text{X}) = \frac{1}{2} n(e^-) = 3.06 \times 10^{-2} \text{ mol} \quad \text{and} \quad M(\text{X}) = \frac{m}{n} = \frac{6.05}{3.06 \times 10^{-2}} = 198 \text{ g mol}^{-1} \text{ (3 SF)}$$

The metal has a molar mass of 198 g (3 SF) and is most probably gold (molar mass 197).

8. a. 5-amino-2-pentanol c. 3-ethylhexanal e. methylbenzene (toluene)
 b. 2,2-dimethylpropanoic acid d. 4,4,4-trichlorobutanoic acid f. 1,2-dibromopropane

Unit 8 Set 15 Reactions of hydrocarbons

1. a. $2\text{C}_4\text{H}_{10}(l) + 13\text{O}_2(g) \rightarrow 8\text{CO}_2(g) + 10\text{H}_2\text{O}(g)$
 b. $\text{CH}_3(\text{CH}_2)_5\text{CH}=\text{CH}_2(l) + \text{HCl}(g) \rightarrow \text{CH}_3(\text{CH}_2)_5\text{CHClCH}_3(l)$ The product must be 2-chlorooctane.
 c. $\text{CH}_3(\text{CH}_2)_4\text{CH}_3(l) + \text{Br}_2(aq) \rightarrow \text{CH}_3(\text{CH}_2)_4\text{CH}_2\text{Br}(l) + \text{HBr}(aq)$
 d. $2\text{C}_2\text{H}_2(g) + 5\text{O}_2(g) \rightarrow 4\text{CO}_2(g) + 2\text{H}_2\text{O}(g)$
 e. $\text{CH}_2 = \text{CH}_2(g) + \text{Br}_2(aq) \rightarrow \text{CH}_2\text{BrCH}_2\text{Br}(l)$
 f. $\text{CH}_3\text{CH}_3(g) + 6\text{Br}_2(g) \rightarrow \text{CBr}_3\text{CBr}_3(l) + 6\text{HBr}(g)$
 g. $\text{C}_6\text{H}_6(l) + \text{Br}_2(aq) \rightarrow \text{C}_6\text{H}_5\text{Br}(l) + \text{HBr}(aq)$
 h. $2\text{C}_8\text{H}_{18}(l) + 17\text{O}_2(g) \rightarrow 16\text{CO}(g) + 18\text{H}_2\text{O}(g)$
 i. $\text{CH} \equiv \text{CH}(g) + 2\text{H}_2(g) \rightarrow \text{CH}_3\text{CH}_3(g)$
 j. $\text{CH}_3\text{C} \equiv \text{CH}(g) + \text{HI}(g) \rightarrow \text{CH}_3\text{Cl} = \text{CH}_2(l)$ The product must be 2-iodopropene.
 k. $\text{C}_5\text{H}_8(l) + \text{Br}_2(aq) \rightarrow \text{C}_5\text{H}_8\text{Br}_2(l)$ The product must be 1,2-dibromocyclopentane.
 l. $\text{CH}_3\text{CH}_2\text{CH}_3(g) + 8\text{Cl}_2(g) \rightarrow \text{CCl}_2\text{CCl}_2\text{CCl}_3(s) + 8\text{HCl}(g)$
 m. $\text{CH}_3(\text{CH}_2)_2\text{C} \equiv \text{CH}(l) + \text{HI}(g) \rightarrow \text{CH}_3(\text{CH}_2)_2\text{CI}_2\text{CH}_3(l)$ The product must be 2,2-diiodopentane.
2. a. i. combustion ii. CO_2 and H_2O iii. The gas burns producing heat and light.
 b. i. substitution ii. chlorooctane and HCl iii. The chlorine water slowly changes from pale yellow-green to colourless.
 c. i. addition ii. 1,2-dibromocyclobutane iii. The bromine solution quickly changes from red-brown to colourless.
 d. i. substitution ii. chlorobenzene and HCl iii. The chlorine water slowly changes from pale yellow-green to colourless.
 e. i. addition ii. 1,1,2,2-tetrabromohexane iii. The bromine solution quickly changes from red-brown to colourless.
3. a. Yes. Propene will rapidly decolourise bromine water (red-brown to colourless). Propane does this much more slowly.
 b. No. An addition reaction occurs in both cases so they both rapidly decolourise bromine water.
 c. No. An addition reaction occurs in both cases so they both rapidly decolourise bromine water.
 d. Yes. An addition reaction occurs with cyclohexene rapidly decolourising bromine water (red-brown to colourless). Benzene decolourises bromine water much more slowly (substitution).
 e. No. A substitution reaction occurs in both cases so they both slowly decolourise bromine water.
 f. Yes. Cyclohexene undergoes addition (rapidly decolourises bromine), while cyclohexane undergoes substitution (slowly decolourises bromine water).
