ENGINEERING STUDIES - STAGE 3

Page 13:   In Question 13, part (a), at the end of the first sentence, insert a negative sign between the m and the superscript 2, in the term in brackets.

The sentence now reads:

'**Suppose the solar water heating system has a collector area of 4 m^2 and the average solar power over a clear and sunny day is 500 joules per second per square metre (J s^{-1} m^{-2}).**'
