Mathematics Methods Unit 4

Logarithm

	Example 2: If $\frac{\log k}{g-h} = \frac{\log g}{h-k} = \frac{\log h}{k-g}$, evaluate $k^{g+h} \times g^{h+k} \times h^{k+g}$.
	Example 3: Solve $\log_{2^2}(z + 1) = 2$ by rewriting it in exponential form.
3.	Algebraic properties of logarithm
	Properties: $log_{x} x^{y} = y \text{or} x^{log_{x} y} = y$ $log_{x} 1 = 0$ $log_{x} x = 1$ $\frac{Change \text{ of base}}{log_{b} c} = \frac{log_{a} c}{log_{a} b}$
	Example 1: Solve $\log_2(x + 2) + \log_2 2 = 4$ Example 2: Solve $0.16^{\frac{\log_2[\frac{1}{5} + \frac{1}{3^2} +]}{5}}$.

```
Example 3:
     If x = \log_{2a} a, y = \log_{3a} 2a, z = \log_{4a} 3a, prove that 1 + xyz = 2yz.
                                                                    [Note that \log_a xy = \log_a x + \log_a y]
    Laws of logarithm
4.
         (a) Product law
     Formula:
                                           \log_a xy = \log_a x + \log_a y
     Derivation of formula:
     Suppose \log_a x = b and \log_a y = c
    a^b(a^c) = a^{b+c}
          xy = a^{b+c}
     \log_a xy = b + c
     Substitute \log_a x = b and \log_a y = c,
     \log_a xy = \log_a x + \log_a y
     Example 1:
     If \log_3 2 = v and \log_3 5 = q. Express \log_3 10 in terms of v and q.
     Example 2:
     Express \log_{45} k + \log_{45} j as a single logarithm.
     Example 3:
    Express y in terms of x for \log_{\sqrt{2}} y = \log_{\sqrt{2}} x^2 + \log_{\sqrt{2}} 2\sqrt{5}.
```

(b) Quotient law

Formula:

$$\log_a \frac{x}{y} = \log_a x - \log_a y$$

Derivation of formula: Suppose $\log_a x = b$ and $\log_a y = c$

 $\frac{a^{b}}{a^{c}} = a^{b-c}$ $\frac{x}{y} = a^{b-c}$ $\log_{a} \frac{x}{y} = b - c$ Substitute $\log_{a} x = b$ and $\log_{a} y = c$, $\log_{a} \frac{x}{y} = \log_{a} x - \log_{a} y$

Example 1: Express $\log_{3\sqrt{\frac{1}{k}}} 3 - \log_{3\sqrt{\frac{1}{k}}} 6$ as a single logarithm.

Example 2: If $\log_r 3 = k$, $\log_r 2 = l$ and $\log_r 12 = m$. Express $\log_r 2$ in terms of k, l and m.

(c) Power law

Formula:

 $\log_a x^n = n \log_a x$

Derivation of formula: Suppose $\log_a x = b$ and $\log_a y = c$

(a^b)ⁿ = a^{bn}Substitute x = a^b, xⁿ = a^{bn} $\log_a xⁿ = bn$ Substitute $\log_a x = b$, $\log_a xⁿ = n \log_a x$

j.	Solving logarithmic functions			
	Summary of several tips to solve logarithmic functions:			
	1. Convert to index form			
2. Use quadratic equation/ substitute variable				
	3. Comparison method			
	(a) Converting to index form			
	Example 1:			
	Solve $\log_2(x+1) + \log_2 4 = 2$.			
	Example 2:			
	Solve $\log_x 25 + \log_x 100 - 2 = 0$.			
	Example 3:			
	Solve $\log_3 - 2 + \log_3 - k = 3$. Express your answer in terms of r.			
	$\sum_{i=1}^{n} \sum_{j=1}^{n} \sum_{i=1}^{n} \sum_{j=1}^{n} \sum_{i$			
	(b) Using quadratic equation/ substituting variable			
	Example 1:			
	Solve $[\log_{5} x]^{2} + \log_{5} x - 1 = 0.$			

Example 2: Solve $2[\log_x 2]^2 = \log_x 128 - 3$.

Example 3: Solve $[\log_{10} x]^3 - [\frac{1}{2}\log_{10} x^2]^2 - \log_{10} x + 1 = 0.$

(c) Comparison method

Example 1: Solve $\log_3 2 + \log_3(x - 1) = 3^a$. Express your answer in term of x.

Example 2: Solve $\log_{k^2} r + \log_{k^2} 2d = 1$ given that r(2d) = 4.

Summary:

Transformation	Effect
$\log_a x + c$	Graph shifts upwards by c units
$\log_a x - c$	Graph shifts downwards by <i>c</i> units
$\log_a(x+c)$	Graph shifts leftwards by c units
$\log_a(x-c)$	Graph shifts rightwards by c units
$\log_a cx$ $c > 1$	Graph compress/ shrunk horizontally by a factor of <i>c</i>
$\log_a \frac{x}{c}$ $c > 1$	Graph stretch horizontally by a factor of <i>c</i>
$c \log_a x$ $c > 1$	Graph stretch vertically by a factor of <i>c</i>
$ \frac{\frac{1}{c}\log_a x}{c > 1} $	Graph compress/ shrunk vertically by a factor of <i>c</i>
$-\log_a x$	Graph reflects about $x = 0/x$ —axis
$\log_a -x$	Graph reflects about $y = 0/y$ -axis

I_R : Relative intensity of earthquake compared to the smallest tremor felt by hum I_c : Intensity of earthquake (measured by the amplitude of a seismograph reading 100km from the epicentre of the earthquake) I_n : Intensity of standard earthquake with amplitude 1 micron= 10^{-4} cm E : Energy released by earthquake in kW	ans 1 taken
Example 1: If an earthquake is 24.5 times more intense, how much larger is its magnitude or scale?	the Richter
Example 2: City X had experienced an earthquake which releases $1.2 \times 10^7 kW$ of energy. Camagnitude of the earthquake.	alculate the
(b) pH scale	
Formula: $pH = -\log_{10} H^+$	
or	
$pH = -\log_{10}H_3O^+$	
<i>H</i> ⁺ : Concentration of hydrogen ions in solution (mol / ℓ) <i>H</i> ₃ <i>O</i> ⁺ : Concentration of hydronium ions in solution (mol / ℓ)	
Example 1: A solution has $1 \times 12^2 M$ of hydrogen ions. Calculate it's pH value.	
, , ,	

Example 2: Calculate the concentration of hydronium ion concentration, H_3O^+ in a juice of 3.5 pH.

(c) Loudness scale

Formula:

$$L = 10 \log_{10}(\frac{l}{l_o})$$

 I_o : reference sound/ threshold of hearing = $10^{-12} W/m^2$

Example 1: The intensity level of a concert is $1.2 W/m^2$. What is the decibel level of the concert?

Example 2: Find the ratio of sound intensity for the sound level of 50 dB and 80 dB.

(d) Music scale

Formula:

Ratio of frequencies

$$x = \log_2 \frac{f_2}{f_1}$$
$$r = \frac{f_2}{f_1} = 2^x$$

$$\log(\frac{f_2}{f_1}) = x \log 2$$

Example 1: What is the number of stops between f/5.6 and f/3.5?

Example 2: Find the stop number given that the number of stops from the initial reference stop number, f/3.5 is 6.7.

END
