Section Two: Calculator-assumed	13	13	100	103	65
Total					100

Instructions to candidates

- The rules for the conduct of Western Australian external examinations are detailed in the *Year 12 Information Handbook 2016*. Sitting this examination implies that you agree to abide by these rules.
- Write your answers in the spaces provided in this Question/Answer Booklet. Spare pages are included at the end of this booklet. They can be used for planning your responses and/or as additional space if required to continue an answer.
 - Planning: If you use the spare pages for planning, indicate this clearly at the top of the page.
 - Continuing an answer: If you need to use the space to continue an answer, indicate in the original answer space where the answer is continued, i.e. give the page number.
Fill in the number of the question(s) that you are continuing to answer at the top of the page.
- Show all your working clearly.** Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat an answer to any question, ensure that you cancel the answer you do not wish to have marked.
- It is recommended that you **do not use pencil**, except in diagrams.
- The Formula Sheet is **not** handed in with your Question/Answer Booklet.

Question 1**(8 marks)**

Differentiate (simplifying and leaving answers with positive indices where appropriate):

a) $y = \frac{3+x^4}{x^2}$. (2 marks)

$$y = \frac{3}{x^2} + x^2 \quad \checkmark \text{ simplifies first}$$

$$\frac{dy}{dx} = -\frac{6}{x^3} + 2x \quad \checkmark \text{ correct answer}$$

b) $f(x) = x^3 \cdot \sin(3x)$. Factorise your answer. (3 marks)

$$\begin{aligned} f'(x) &= 3x^2 \sin 3x + 3x^3 \cos 3x \quad \checkmark \checkmark \text{ differentiates using} \\ &= 3x^2 (\sin 3x + x \cos 3x) \quad \checkmark \text{ product rule correctly} \\ &\quad \checkmark \text{ expresses as a product} \end{aligned}$$

c) $F(x) = \int_1^{2x} t^3 e^t dt$ (3 marks)

$$\begin{aligned} F'(x) &= (2x)^3 e^{2x} (2) \quad \checkmark \checkmark \\ &= 16x^3 e^{2x} \quad \checkmark \text{ correct simplified answer} \end{aligned}$$

Question 2**(5 marks)**

- a) Determine $\frac{d}{dx}(e^{-x}(x-2))$. (2 marks)

$$\begin{aligned}
 &= -e^{-x}(x-2) + e^{-x} && \checkmark \text{ uses product rule} \\
 &= e^{-x}(3-x) && \checkmark \text{ differentiates product correctly} \\
 &= \frac{3-x}{e^x}
 \end{aligned}$$

- b) Hence, or otherwise, evaluate exactly $\int_0^1 \frac{3-x}{e^x} dx$. (3 marks)

$$\text{From (a) } \frac{d}{dx}(e^{-x}(x-2)) = \frac{3-x}{e^x} \quad \checkmark \text{ understands and uses result from part (a)}$$

$$\begin{aligned}
 \text{Hence } \int_0^1 \frac{3-x}{e^x} dx &= [e^{-x}(x-2)]_0^1 && \checkmark \text{ integrates correctly} \\
 &= e^{-1}(-1) - e^0(-2) \\
 &= 2 - \frac{1}{e} && \checkmark \text{ correct answer}
 \end{aligned}$$

Question 3**(7 marks)**Differentiate the following with respect to x , simplifying your answers.

a) $y = (1 - \ln x)^3$

(2 marks)

$$\begin{aligned}\frac{dy}{dx} &= 3(1 - \ln x)^2 \cdot \left(-\frac{1}{x}\right) \\ &= \frac{-3(1 - \ln x)^2}{x}\end{aligned}$$

✓ uses chain rule to differentiate

✓ simplifies answer

b) $y = \log_2(x)$

(2 marks)

$$\therefore y = \frac{\ln x}{\ln 2} \quad \text{using change of base rule } \checkmark \text{ c.o.b.}$$

$$\frac{dy}{dx} = \frac{1}{\ln 2} \times \frac{1}{x} = \frac{1}{x \ln 2}$$

✓ differentiates correctly

c) $y = \ln\left(\frac{x^3}{7-4x}\right)$

(3 marks)

$$y = 3 \ln x - \ln(7-4x) \quad \checkmark \text{ uses log laws to simplify}$$

$$\therefore \frac{dy}{dx} = \frac{3}{x} - \frac{-4}{7-4x} \quad \checkmark \checkmark \text{ differentiates each term correctly}$$

$$= \frac{3}{x} + \frac{4}{7-4x}$$

Question 4**(8 marks)**

A biased die with six faces is rolled. The discrete random variable X represents the score on the uppermost face. The probability distribution of X is shown in the table below.

x	1	2	3	4	5	6
$P(X=x)$	a	a	a	b	b	0.3

- a) Given that $E(X) = 4.2$ find the value of a and the value of b . (5 marks)

$$3a + 2b + 0.3 = 1 \quad \checkmark \Sigma p = 1 \quad E(X) = 4.2$$

i.e. $3a + 2b = 0.7$ ① $\therefore a + 2a + 3a + 4b + 5b + 1.8 = 4.2$ \checkmark calc $E(X)$ correctly

$$\therefore 6a + 9b = 2.4$$
 ②
$$2 \times \text{①} \quad 6a + 4b = 1.4$$
 ③ \checkmark valid method shown
$$6a + 9b = 2.4$$
 ④
$$\text{②} - \text{③} \quad 5b = 1 \Rightarrow b = 0.2 \quad \checkmark$$
 solves for b

$$\text{sub in ①} \quad 3a + 0.4 = 0.7 \Rightarrow a = 0.1 \quad \checkmark$$
 solves for a

- b) Given $E(X^2) = 20.4$, determine $\text{Var}(5-10X)$. (3 marks)

$$\begin{aligned} \text{Var}(5-10X) &= (-10)^2 \text{Var}(X) && \checkmark \text{ correct change of scale} \\ &= 100 [20.4 - 4.2^2] && \checkmark \text{ subs in correctly} \\ &= 100 [20.4 - 17.64] \\ &= 100 [2.76] \\ &= 276 && \checkmark \text{ ans} \end{aligned}$$

Question 5**(6 marks)**

A biased die with five faces is rolled. The discrete random variable D represents the score which is on the uppermost face.

The cumulative distribution function of D is shown in the table below.

d	1	2	3	4	5
$P(D \leq d)$	$\frac{1}{10}$	$\frac{2}{10}$	$3k$	$4k$	$5k$

- a) Calculate the value of k . (1 mark)

$$5k = 1 \Rightarrow k = \frac{1}{5} \text{ or } \frac{2}{10}$$

ans

- b) Give the probability distribution of D . (3 marks)

d	1	2	3	4	5
$P(D=d)$	$\frac{1}{10}$	$\frac{1}{10}$	$\frac{4}{10}$	$\frac{2}{10}$	$\frac{2}{10}$

✓ tabulates
✓ P(D=3) correct
✓ all correct

This die is rolled twice and the two scores are added.

- c) Calculate the probability that the sum of the two scores equals 3. (2 marks)

$$\begin{aligned} \text{i.e. } P(1, 2) + P(2, 1) &= \frac{1}{10} \times \frac{1}{10} + \frac{1}{10} \times \frac{1}{10} \\ &= \frac{2}{100} \text{ or } \frac{1}{50} \text{ or } 0.02 \end{aligned}$$

✓ identifies 2,1 and 1,2
✓ determines prob correctly

Question 6**(5 marks)**Given that $\log_{10} 2 = x$ and $\log_{10} 3 = y$, express each of the following in terms of x and y .

a) $\log_{10} 6$

(1 mark)

$$= \log 2 + \log 3$$

$$= x + y \quad \checkmark \text{ ans}$$

b) $\log_{10} 0.6$

(1 mark)

$$= \log \left(\frac{6}{10} \right)$$

$$= \log 6 - \log 10$$

$$= x + y - 1 \quad \checkmark \text{ ans}$$

c) $\log_{10} 45$

(3 marks)

$$= \log (9 \div 2 \times 10)$$

$$= \log 9 - \log 2 + \log 10$$

$$= 2 \log 3 - \log 2 + \log 10 \quad \checkmark \log 9 = 2 \log 3$$

$$= 2y - x + 1 \quad \checkmark \text{ ans}$$

✓ identifies 45 as $9 \frac{1}{2} \times 10$

Question 7**(7 marks)**

- a) Solve $2[\log_2(x)]^2 - 9\log_2(x) + 4 = 0$ giving your answer(s) exactly. (4 marks)

$$\text{i.e. } (2\log_2 x - 1)(\log_2 x - 4) = 0$$

$$\therefore \log_2 x = \frac{1}{2} \text{ or } \log_2 x = 4$$

$$\therefore x = \sqrt{2} \text{ or } x = 16$$

$$\checkmark x = \sqrt{2}$$

$$\checkmark x = 16$$

\checkmark factorises correctly

\checkmark uses null factor law correctly

- b) Express y in terms of x if $2\log_e x + 1 = \frac{\log_e 3y}{2}$. (3 marks)

$$\text{i.e. } 4 \ln x + 2 = \ln 3y$$

$$\therefore 4 \ln x + \ln e^2 = \ln 3y$$

$$\text{i.e. } \ln(x^4 e^2) = \ln 3y$$

$$\therefore x^4 e^2 = 3y$$

$$\therefore y = \frac{x^4 e^2}{3}$$

\checkmark uses log laws correctly

\checkmark equates equivalent sides

\checkmark solves for y

Question 8**(6 marks)**

Part of the graph of $y = f(x)$ is shown below. The areas of the bounded regions A and B are 9 and 5 square units respectively.

- a) Evaluate $\int_{-1}^1 f(x) dx$ (2 marks)

$$9 + (-5) = 4 \quad \begin{array}{l} \checkmark \text{ adds signed areas} \\ \checkmark \text{ correct answer} \end{array}$$

- b) Evaluate $\int_{-1}^1 |f(x)| dx$ (1 mark)

$$9 + 5 = 14 \quad \checkmark \text{ correct answer}$$

- c) Evaluate $\int_{-1}^1 3 - f(x) dx$ (3 marks)

$$\begin{aligned} &= \int_{-1}^1 3 dx - \int_{-1}^1 f(x) dx && \checkmark \text{ identifies the two components of the integral} \\ &= 6 - (9 - 5) && \checkmark \text{ determines integrals correctly} \\ &= 2 && \checkmark \text{ correct answer} \end{aligned}$$
