

Semester Two Examination, 2018

Question/Answer booklet

MATHEMATICS SPECIALIST UNITS 1 AND 2 Section Two: Calculator-assumed		SOLUTIONS
Student number:	In figures	
	In words	
	Your name	

Time allowed for this section

Reading time before commencing work: Working time: ten minutes one hundred minutes

Materials required/recommended for this section

To be provided by the supervisor This Question/Answer booklet Formula sheet (retained from Section One)

To be provided by the candidate

Standard items: pens (blue/black preferred), pencils (including coloured), sharpener, correction fluid/tape, eraser, ruler, highlighters

Special items: drawing instruments, templates, notes on two unfolded sheets of A4 paper, and up to three calculators approved for use in this examination

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised material. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of examination
Section One: Calculator-free	8	8	50	52	35
Section Two: Calculator-assumed	13	13	100	98	65
				Total	100

Instructions to candidates

- 1. The rules for the conduct of Trinity College examinations are detailed in the *Instructions to Candidates* distributed to students prior to the examinations. Sitting this examination implies that you agree to abide by these rules.
- 2. Write your answers in this Question/Answer booklet.
- 3. You must be careful to confine your response to the specific question asked and to follow any instructions that are specified to a particular question.
- 4. Supplementary pages for the use of planning/continuing your answer to a question have been provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- 5. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- 6. It is recommended that you do not use pencil, except in diagrams.
- 7. The Formula sheet is not to be handed in with your Question/Answer booklet.

Section Two: Calculator-assumed

This section has **thirteen (13)** questions. Answer **all** questions. Write your answers in the spaces provided.

Working time: 100 minutes.

Question 9

(7 marks)

(a) Given that $\frac{18 \times 17 \times 16}{16 \times 15 \times 14 \times 13} = \frac{{}^{n}P_{r}}{{}^{m}P_{4}}$, determine the values of n, r and m. (3 marks)

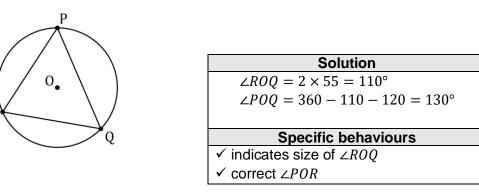

Solution
$18 \times 17 \times 16$ $18!$ $12!$ $18!$ $12!$
$\overline{16 \times 15 \times 14 \times 13} = \overline{16!} \times \overline{15!} = \overline{15!} \times \overline{16!}$
$\frac{18!}{15!} = {}^{18}P_3, \qquad \frac{16!}{12!} = {}^{16}P_4$
$\frac{15!}{15!} - r_3, \frac{12!}{12!} - r_4$
n = 18, r = 3, m = 16
Specific behaviours
✓ expresses fraction with factorials
✓ expresses as permutations
✓ lists all values

(b) Determine how many integers between 1 and 100 inclusive are divisible by 2, 3 or 7. (4 marks)

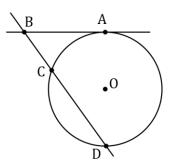

Solution $[100 \div 2] + [100 \div 3] + [100 \div 7] = 50 + 33 + 14 = 97$ $[100 \div 6] + [100 \div 14] + [100 \div 21] = 16 + 7 + 4 = 27$ $[100 \div 42] = 2$ n = 97 - 27 + 2 = 72 integersSpecific behaviours \checkmark correct number divisible singly \checkmark correct number divisible by pairs \checkmark correct number divisible by all three \checkmark correct total

R

(a) In the circle shown below, minor arc *PR* subtends an angle of 120° at *O*, the centre of the circle, and the size of angle *RPQ* is 55°. Determine the size of angle *POQ*. (2 marks)

(b) In the diagram below, *AB* is tangent to the circle with centre *O* at *A*, secant *BD* intersects the circle at *C* and *D*, and the sizes of angles *AOC* and *COD* are 72° and 104° respectively. Determine the size of angle *ABC*. (4 marks)

Solution
$\angle ODC = \frac{180 - 104}{2} = 38^{\circ}$
$\angle DOA = 72 + 104 = 176^{\circ}$
$\angle OAB = 90^{\circ}$
Using OABD:
$\angle ABC = 360 - 38 - 176 - 90$ = 56°
Specific behaviours
✓ correct ∠ ODC
✓ correct ∠ DOA
✓ indicates ∠ <i>OABA</i> is right-angle
✓ correct ∠ <i>ABC</i>

Question 11

(b)

Two matrices are given by $P = \begin{bmatrix} 8 & 3 \\ -6 & 5 \end{bmatrix}$ and $Q = \begin{bmatrix} 5 & -3 \\ 6 & 8 \end{bmatrix}$.

Solution
po [58 0]
$PQ = \begin{bmatrix} 58 & 0\\ 0 & 58 \end{bmatrix}$
- 0 50-
Specific behaviours
✓ correct product

Given that
$$Q^{-1} = kP$$
, determine the exact value of the constant k .
Solution
 $Q^{-1}Q = kPQ \Rightarrow I = kPQ$
 $k = \frac{1}{58}$
Specific behaviours
 \checkmark uses matrix algebra or states Q^{-1}
 \checkmark correct value

The system of equations 5a = 3b + 29 and 6a + 8b + 87 = 0 can be expressed as a matrix equation in the form QX = R.

Solution

$$\begin{bmatrix} 5 & -3 \\ 6 & 8 \end{bmatrix} \times \begin{bmatrix} a \\ b \end{bmatrix} = \begin{bmatrix} 29 \\ -87 \end{bmatrix}$$

$$X = \begin{bmatrix} a \\ b \end{bmatrix}, \quad R = \begin{bmatrix} 29 \\ -87 \end{bmatrix}$$

Specific behaviours

 \checkmark correct matrix X \checkmark correct matrix R

Solution

$$QX = R$$

$$Q^{-1}QX = Q^{-1}R$$

$$X = \frac{1}{58}PR$$
Specific behaviours

- pre-multiplies by Q^{-1} ✓ correct expression
- (e) Solve the system of equations.

Solution

$$a = -0.5, \quad b = -10.5$$

Specific behaviours
 \checkmark correct solution

Semester 2 2018 **Section 2 Calculator-Assumed**

(1 mark)

(2 marks)

(2 marks)

Question 12

(a) Show how to express $0.\overline{23}$ as a rational number.

Solution	
If $x = 0.232323$ then $100x = 23.232323$	
Hence by subtraction $99x = 23 \Rightarrow x = \frac{23}{99}$, which is rational.	
- 99	
Specific behaviours	
\checkmark expresses as x and 100x	
\checkmark uses subtraction to express as rational	

(b) Prove that the sum of any three consecutive integers is always a multiple of three.

(3 marks)

Solution
Let the integers be $n, n + 1, n + 2$ and their sum be S.
S = n + n + 1 + n + 2
= 3n + 3
= 3(n+1)
Hence S is always a multiple of 3.
Specific behaviours
✓ clearly indicates three consecutive integers
✓ creates sum

✓ factors out 3 and makes conclusion

(c) Prove by contradiction that $\sqrt{7}$ is irrational.

(3 marks)

SolutionAssume that $\sqrt{7}$ is rational and can be expressed in the form $\frac{a}{b}$, where aand b are integers with **no common factor** greater than 1. $\sqrt{7} = \frac{a}{b} \Rightarrow a^2 = 7b^2$, so that a^2 and hence a must be a multiple of 7.Since a = 7k (k an integer) then $(7k)^2 = 7b^2 \Rightarrow 7k^2 = b^2$, so that b^2 and hence b must be a multiple of 7.Since a and b are both multiples of 7, the assumption they have no common factor is contradicted and so $\sqrt{7}$ must be irrational.**Specific behaviours** \checkmark makes rational assumption including bolded condition \checkmark deduces that a and b must both be multiples of 7

(8 marks) (2 marks)

(i)

Let vector $\mathbf{a} = 6\mathbf{i} - 5\mathbf{j}$.

(a) Determine the angle between \mathbf{a} and $9\mathbf{i} + 8\mathbf{j}$.

Using CAS

✓ correct angle

Solution

 $\theta = 81.4^{\circ}$

Specific behaviours

- (b) Let vector $\mathbf{b} = 21\mathbf{i} + t\mathbf{j}$. Determine the value of t so that \mathbf{a} is
 - parallel to **b**. Solution $\frac{6}{21} = \frac{-5}{t} \Rightarrow t = -5 \times \frac{21}{6} = -\frac{35}{2} = -17.5$ Specific behaviours \checkmark indicates method \checkmark correct value

7

(ii) perpendicular to **b**.

Solution $\mathbf{a} \cdot \mathbf{b} = 0 \Rightarrow (6)(21) + (-5)(t) = 0$ $t = \frac{126}{5} = 25.2$ Specific behaviours ✓ indicates method ✓ correct value

(c) Determine the vector projection of \mathbf{a} on $-3\mathbf{i} + 4\mathbf{j}$.

SolutionLet
$$\mathbf{c} = 6\mathbf{i} - 8\mathbf{j}$$
. Then $\hat{\mathbf{c}} = -0.6\mathbf{i} + 0.8\mathbf{j}$.Using CAS, $(\mathbf{a} \cdot \hat{\mathbf{c}})\hat{\mathbf{c}} = \frac{114}{25}\mathbf{i} - \frac{152}{25}\mathbf{j} = 4.56\mathbf{i} - 6.08\mathbf{j}$ Specific behaviours \checkmark indicates unit vector $\hat{\mathbf{c}}$ \checkmark indicates method \checkmark correct projection

Question 14

Two forces act on a body. F_1 has a magnitude of 285 N and acts on a bearing of 145. F_2 has a magnitude of 245 N and acts on a bearing of 075.

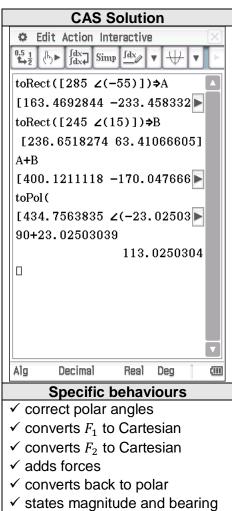

8

- (a) Determine
 - (i) the magnitude and direction of the sum of the two forces.

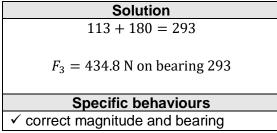

(6 marks)

(8 marks)

Solution	
Solution N $35^{\circ} \alpha$ $110^{\circ} 245$ $R^{2} = 285^{2} + 245^{2} - 2(285)(245) \cos 110$ R = 434.8 N $\frac{434.8}{\sin 110} = \frac{245}{\sin \alpha}$ $\alpha = 32.0^{\circ}$ Bearing: $180 - 35 - 32.0 \approx 113$	0.5 1.0 [1] tol [2] A+ [4] 90 [2]
.	
Specific behaviours	
\checkmark triangle showing sum of two forces	Alg
\checkmark use of cosine rule with correct angle	
✓ correct magnitude	√ (
✓ indicates use of sine rule	
\checkmark correct value of α	√ (
✓ correct bearing	√ (
	v a

(ii) the magnitude and direction of a third force that would keep the body in equilibrium.

(1 mark)

(b) The bearing F_2 acts on is changed so that the direction of $F_1 + F_2$ is due east. Determine the new bearing of F_2 . (4 marks)

Solution
$N R$ $55^{\circ} \lambda$ $35^{\circ} 245$ 285
$\frac{285}{\sin\lambda} = \frac{245}{\sin 55}$
$\lambda = 72.3^{\circ} \text{ or } 107.7^{\circ}$
Bearings: $90 - 72.3 = 017.7$ or: $360 - (107.7 - 90) = 342.3$
Specific behaviours
✓ diagram
✓ indicates use of sine rule
\checkmark correct values of λ
✓ both possible bearings

Question 15

Circle *C* has equation $(x + 3)^2 + (y - 5)^2 = 25$.

(a) Circle *C* is transformed by the matrix $M = \begin{bmatrix} 0 & 1 \\ -1 & 0 \end{bmatrix}$ to circle *C'*. Describe the direction and size of the rotation transformation *M* and state the equation of circle *C'*. (3 marks)

Solution	
<i>M</i> is a rotation about $(0, 0)$ of -90° .	
Centre: $\begin{bmatrix} 0 & 1 \\ -1 & 0 \end{bmatrix} \begin{bmatrix} -3 \\ 5 \end{bmatrix} = \begin{bmatrix} 5 \\ 3 \end{bmatrix}$	
Equation: $(x - 5)^2 + (y - 3)^2 = 25 = 5^2$	
Specific behaviours	
\checkmark states rotation with angle (<i>dilation centre not required</i>)	
✓ identifies new centre	
✓ correct equation	

(b) Circle *C*' is then transformed by the matrix $N = \begin{bmatrix} 2 & 0 \\ 0 & 2 \end{bmatrix}$ to circle *C*''. Describe transformation *N* and state the equation of circle *C*''.

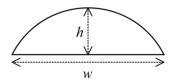

(3 marks)

Solution	
N is a dilation about (0, 0) of scale factor 2.	
Centre: $\begin{bmatrix} 2 & 0 \\ 0 & 2 \end{bmatrix} \begin{bmatrix} 5 \\ 3 \end{bmatrix} = \begin{bmatrix} 10 \\ 6 \end{bmatrix}$	
(0 2) (3) (6)	
Equation: $(x - 10)^2 + (y - 6)^2 = (5 \times 2)^2 = 10^2 = 100$	
Specific behaviours	
✓ states dilation with scale factor (<i>dilation centre not required</i>)	
✓ identifies new centre	
✓ correct equation	

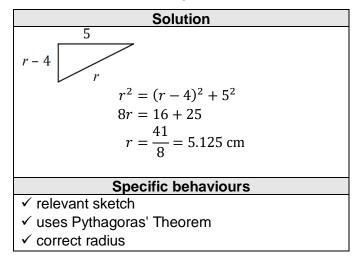

(c) Determine the single matrix P that will transform circle C'' back to circle C. (2 marks)

Solution
$(NM)^{-1} = \begin{bmatrix} 0 & -\frac{1}{2} \\ \frac{1}{2} & 0 \end{bmatrix}$
Specific behaviours
✓ indicates correct method
\checkmark correct matrix P

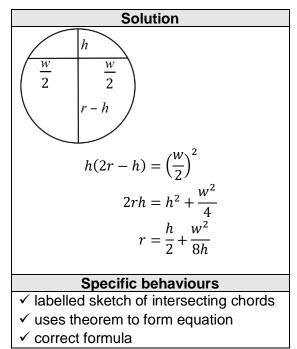

A segment of a circle has a perpendicular height of h and width w.

(a) Determine the radius of the arc of the segment when h = 4 cm and w = 10 cm. (3 marks)

(b) Use the intersecting chord theorem to derive a formula for the radius of the arc of a segment of width w and height h, where the chords are the straight edge of the segment and the diameter of the circle.
 (3 marks)

(6 marks)

Let $N = \{0, 1, 2, 3, 4, 5\}.$

(a) Two or four-digit codes are to be formed using integers selected from N, such as 52 or 0307.

12

Determine the number of codes that can be formed if

(i) there are no restrictions.

 Solution

 $6^2 + 6^4 = 36 + 1296$

 = 1332 codes

 Specific behaviours

✓ indicates number of 2- and 4- digit codes
 ✓ correct total

- (ii) no integer may be used more than once in a code.
 - Solution ${}^{6}P_{2} + {}^{6}P_{4} = 30 + 360$ = 390 codesSpecific behaviours ✓ uses permutations for 2- and 4- digit codes ✓ correct total
- (b) Using the pigeon-hole principle or otherwise, prove that when four integers are selected from *N*, at least one pair of the integers will have a sum of 5. (3 marks)

Solution
Partition N into 3 pigeon-holes with sums of 5: $\{0, 5\}, \{1, 4\}, \{2, 3\}$
If 4 integers (pigeons) are selected from N then by the pigeon-hole principle, at least 2 must be in the same pigeon-hole.
Hence at least one pair of the integers will have a sum of 5.
Specific hohovieuro
Specific behaviours
✓ lists pigeonholes
✓ uses pigeonhole principle
✓ makes conclusion

(2 marks)

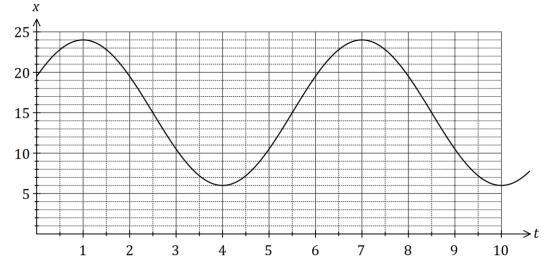

(7 marks)

(2 marks)

(8 marks)

(4 marks)

A small body *P* moves in a straight line. The displacement of the body from a fixed point *O* is given by $x = a \sin(b(t + c)) + d$, where *x* is in centimetres, *t* is the time in seconds. The graph of *x* against *t* is shown below.

(a) Determine the values of the **positive** constants *a*, *b*, *c* and *d*.

Solution $a = (24 - 6) \div 2 = 9$ $b = \frac{2\pi}{6} = \frac{\pi}{3}$ $c = \frac{1}{2} \quad (\text{or } 6.5, 12.5, ...)$ d = 24 - 9 = 15Specific behaviours \checkmark each correct value

(b) Determine the first time that *P* is 18 cm from *O* after 150 seconds, giving your answer to two decimal places. (2 marks)

Solution
$9\sin\left(\frac{\pi}{3}\left(t-\frac{1}{2}\right)\right) + 15 = 18$
t = 152.18 s
Specific behaviours
✓ method
✓ correct time

(c) Express the relationship between x and t as a cosine function.

Solution $c = \frac{1}{2} - \frac{1}{4}(6) = -1$ (or -7, -1, 5, ...) $x = 9 \cos\left(\frac{\pi}{3}(t-1)\right) + 15$ Specific behaviours \checkmark only changes value of c \checkmark correct function

(2 marks)

Use mathematical induction to prove that for all positive integers n

$$1 \times 7 + 2 \times 8 + 3 \times 9 + \dots + n(n+6) = \frac{n}{6}(n+1)(2n+19).$$

Colution

Let Claim(n) be the statement

$$1 \times 7 + 2 \times 8 + 3 \times 9 + \dots + n(n+6) = \frac{n}{6}(n+1)(2n+19)$$

Claim(1) is the statement $1 \times 7 = \frac{1}{6}(2)(21)$ and so Claim(1) is shown to be true.
Assume Claim(k) is true so that
 $1 \times 7 + 2 \times 8 + 3 \times 9 + \dots + k(k+6) = \frac{k}{6}(k+1)(2k+19)$
LHS of Claim(k+1) = $1 \times 7 + 2 \times 8 + \dots + k(k+6) + (k+1)(k+1+6)$

$$= \frac{k}{6}(k+1)(2k+19) + (k+1)(k+7) \text{ using Claim}(k)$$

$$= \frac{k+1}{6}(2k^2+19k+6k+42)$$

$$= \frac{k+1}{6}(k+2)(2k+21)$$

$$= RHS \text{ of Claim}(k+1)$$

We have shown that Claim(1) is true and that $Claim(k) \Rightarrow Claim(k + 1)$ and so by the principle of mathematical induction it follows that Claim(n) is true.

Specific behaviours

 \checkmark shows truth of Claim(1)

✓ clearly states assumption

✓ adds k + 1 term to statement, using Claim(k)

✓ factors out (k + 1)

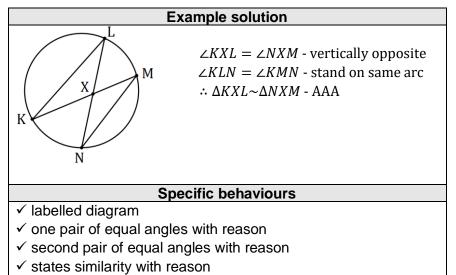

✓ completes factorisation

✓ closing statement

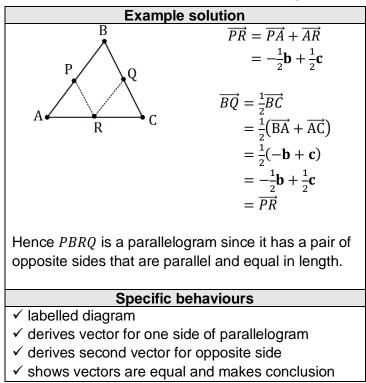

(6 marks)

(8 marks)

(a) The four points K, L, M and N lie in that order on the circumference of a circle. Chords KM and LN intersect at X. Prove that $\Delta KXL \sim \Delta NXM$. (4 marks)

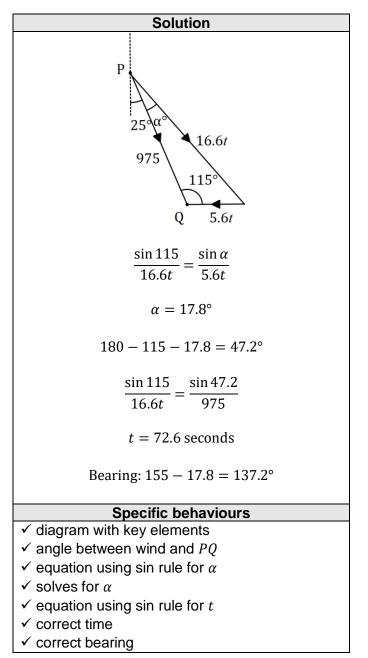

(b) In triangle *ABC*, *P*, *Q* and *R* are the midpoints of *AB*, *AC* and *BC* respectively. If $\overrightarrow{AB} = \mathbf{b}$ and $\overrightarrow{AC} = \mathbf{c}$, use a vector method to prove that *PBRQ* is a parallelogram. (4 marks)

(7 marks)

A small drone is to fly in a straight line and at a constant altitude from *P* to *Q*. *Q* lies 975 m away from *P* on a bearing of 155° and a steady wind of 5.6 ms⁻¹ is blowing in the area from due east.

If the speed of the drone is set to 16.6 ms^{-1} , determine the bearing it should steer and the time that it will take to reach Q.
