Instructions to candidates

1. The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.

2. Write your answers in this Question/Answer booklet preferably using a blue/black pen. Do not use erasable or gel pens.

3. You must be careful to confine your answer to the specific question asked and to follow any instructions that are specified to a particular question.

4. Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.

Question 5 **(7 marks)**

A particle leaves the origin at time $t = 0$ with initial velocity $v = 4$ and moves in a straight line with acceleration given by

$$\frac{d}{dx}\left(\frac{1}{2}v^2\right) = x - 4$$

where v is its velocity and x is its displacement from the origin at time t, $t \geq 0$.

(a) Show $v = 4 - x$. (4 marks)

Solution

$$\frac{1}{2}v^2 = \int x - 4\, dx$$
$$= \frac{1}{2}x^2 - 4x + c$$

$$v = 4, x = 0 \Rightarrow 8 = c$$
$$\frac{1}{2}v^2 = \frac{1}{2}x^2 - 4x + 8$$
$$v^2 = x^2 - 8x + 16 = (x-4)^2$$
