# ATMAS Mathematics Specialist 2019 Test 2

Calculator Free

Name: .....

Time Allowed : 50 minutes

Marks	/59
-------	-----

**Materials allowed:** No special materials.

**All necessary working and reasoning must be shown for full marks.**

*Where appropriate, answers should be given in exact values.*

*Marks may not be awarded for untidy or poorly arranged work.*

- 1** For a line passing through the point  $\begin{pmatrix} 5 \\ -1 \end{pmatrix}$  and parallel to the vector  $\begin{pmatrix} 1 \\ 4 \end{pmatrix}$ , find
- a) The vector equation of the line. (1)
- b) The parametric equations of the line. (2)
- c) The Cartesian equation of the line. (2)
- 2** Line  $L_1$  has the vector equation  $\mathbf{r} = \begin{pmatrix} 2 \\ 4 \end{pmatrix} + \lambda \begin{pmatrix} -2 \\ 3 \end{pmatrix}$ . Find the equation of  $L_2$ , a line perpendicular to  $L_1$  and passing through position  $\begin{pmatrix} 1 \\ -5 \end{pmatrix}$ . (2)

- 3 If  $f(x) = 9 - x^2$  and  $g(x) = \sqrt{x + 7}$ , determine the domain and range of the composition  $g(f(x))$ . (4)

- 4 The graph below shows the function  $f(x) = (x - 4)^2 + 2$ .

- a) Determine an appropriate restriction on the domain of  $f(x)$  so that the inverse  $f^{-1}(x)$  exists and is a decreasing function. (1)
- b) Give the equation of the inverse based on your answer to part (a) in the form  $y = \dots$  (2)

- 5 The function  $f(x)$  is defined as  $f(x) = |x + 3| + |x - 1|$
- a) Remove the absolute value signs by writing the function in piecewise form. (3)

$$f(x) = \begin{cases} \text{_____} \\ \text{_____} \\ \text{_____} \end{cases}$$

- b) Sketch the function  $f(x) = |x + 3| + |x - 1|$  on the set of axes below. (3)

- c) Hence of otherwise solve  $|x + 3| + |x - 1| = 8$  (1)

**6**

The position vectors  $\begin{pmatrix} 5 \\ 2 \\ 2 \end{pmatrix}$ ,  $\begin{pmatrix} -3 \\ 4 \\ -1 \end{pmatrix}$  and  $\begin{pmatrix} 2 \\ 6 \\ -5 \end{pmatrix}$  are all points on the plane  $P_1$ .

a) Determine the vector equation of  $P_1$  using appropriate parameters. (3)

b) Determine the Cartesian equation of  $P_1$ . (4)

**7** If  $h(x) = \frac{1}{8x}$  and  $h(k(x)) = 2^{3-3x-3x^2}$ , find the equation of  $k(x)$ . (4)

- 8 Consider the rational function  $y = \frac{3x^2}{x-1}$ . Given that  $\frac{d^2y}{dx^2} = \frac{6}{(x-1)^3}$ , draw a sketch of the function, indicating on your sketch important features such as asymptotes, intercepts, and critical points. (6)

- 9 The graph below was created from the function  $y = \frac{f(x)}{g(x)}$ . Both  $f(x)$  and  $g(x)$  are functions with order less than 3.

Determine both  $f(x)$  and  $g(x)$ .

(5)

10

The graph below shows  $y = f(x)$ .

- a) Mark on the graph the points where  $f(x)$  would intersect with  $\frac{1}{f(x)}$ . (2)  
(Do not graph  $\frac{1}{f(x)}$ .)
- b) Add a sketch of  $f^{-1}(x)$  to the axes above, indicating at least 3 key points. (4)
- c) Explain why  $f^{-1}(x)$  is not a function. (1)

**11**

a) Determine any points of intersection between the sphere  $\left| \mathbf{r} - \begin{pmatrix} 5 \\ -1 \\ 2 \end{pmatrix} \right| = 3$  and the line (4)

$$\mathbf{r} = \begin{pmatrix} -2 \\ 3 \\ 2 \end{pmatrix} + \lambda \begin{pmatrix} 1 \\ -1 \\ 0 \end{pmatrix}$$

b) Calculate the shortest distance between the sphere  $\left| \mathbf{r} - \begin{pmatrix} 5 \\ -1 \\ 2 \end{pmatrix} \right| = 3$  and the (5)

plane  $\mathbf{r} \cdot \begin{pmatrix} 3 \\ 0 \\ -4 \end{pmatrix} = -68$
